

Step 1:

Print the stencils and cover it up with clear or masking tape. (You can also make your own design!)

Step 2:

Fill in the color. (I used Clearly Stormy at this one)

Step 3:

Then add details on the lens.

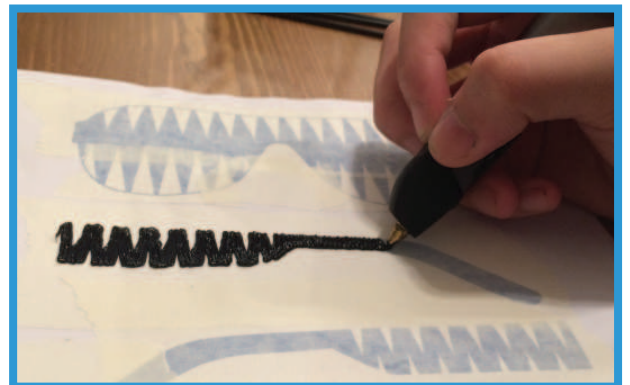

Step 4:

Create a rim.

Step 5:

To make a stronger rim, outline the lens on the front, back and inbetween.

Step 6:

Fill in the stencil for the temples of the glasses.

Step 7:

Make a base on the end pieces on the side of the glasses.

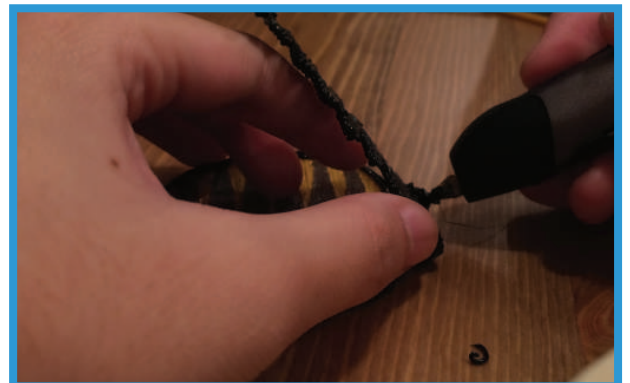

Step 8:

Stick in a small strand as a screw.

Step 9:

To create a hinge, use the unblocking tool, stick masking tape over it and doodle over it. Remember to roll it while it's hot so that it gives a more firm hinge.

Step 10:

Once you stick the hinge with the temples, insert it inside the end piece and close the top part of the end piece. Don't forget to repeat Step 7-10 on the other side of the sunglasses!
